

ALIGNED WITH OUR INDUSTRY

As members of the Scotch Whisky Association, our sustainability efforts are aligned with and support the goals outlined in the Scotch Whisky Industry Sustainability Strategy 2040. This includes: tackling climate change; using water responsibly; caring for the land; and, moving to a circular economy.

WE ARE REDUCING OUR CARBON FOOTPRINT

We eliminated the use of fuel oil at our GlenDronach Distillery, replacing it with Liquified Petroleum Gas, improving energy efficiency, and reducing carbon emissions by approximately 15%. Starting in 2022, all electricity for our single malt distilleries will be from renewable sources.

We continue to invest in energy efficiency projects at each of our production facilities, including LED lighting upgrades, building improvements, and enhanced energy use monitoring.

WE ARE ZERO WASTE OPERATIONS

Distillery by products such as Draff and Pot Ale are recovered and reused for animal feed or energy production. Our Benriach Distillery is a member of the Combination of Rothes Distillers, where a bioenergy plant converts Draff and other biomass (like wood chips) into renewable energy for the area, and Pot Ale is converted into animal feed.

Our production facilities collect all other waste materials for recycling or for energy recovery; no waste materials are sent to landfill.

WE ARE COMMITTED TO SUSTAINABLE PACKAGING

As part of our sustainable packaging strategy, all package redesigns undergo a sustainability review comparing the current package to proposed changes, prioritizing sustainability improvements. Our recent redesign of the Benriach package included an increase in recycled content and reduction in weight of our 700ml glass bottle.
